Creating a Dictionary
 A dictionary is a COM object (called the Dictionary object) that is available through the Microsoft Scripting Runtime library.
 To create a Dictionary object in VBScript code, we use the `CreateObject` function with the programmatic identifier (ProgID) of `Scripting.Dictionary`.

```
Dim dict
Set dict = CreateObject("Scripting.Dictionary")
```

Methods:
1) Add Method: Adds a key and item pair to a Dictionary object.
Syntax: `VBScript Dictionary Object.Add Method`
Object.Add key, item
Example:

```
Dim d
Set d = CreateObject("Scripting.Dictionary")
d.Add "a", "Athens"
d.Add "b", "Belgrade"
d.Add "c", "Cairo"
```

III BSC CS - WEB TECH - 20th JAN, 2021 (2021-01-19 at 20:45 GMT-8)

```
a = d.Remove("b")
```

6) RemoveAll Method:
 The `RemoveAll` method removes all key, item pairs from a Dictionary object.
Syntax: `object.RemoveAll`

```
a = d.RemoveAll
```

 'Clear the dictionary

Properties:
1) CompareMode Property: Sets and returns the comparison mode for comparing string keys in a Dictionary object.
Syntax: `object.CompareMode [= compare]`

The `compare` argument has the following settings:

Constant	Value	Description
<code>vbBinaryCompare</code>	0	Perform a binary comparison.
<code>vbTextCompare</code>	1	Perform a textual comparison.

2) Count Property: Returns the number of items in a Dictionary object. Read-only.
Syntax: `object.Count`
