**Design for a set of support services**

- Design for a set of support services that provide open service-oriented capabilities and can be used for application development and execution.
- What we already have seen in the service layer-oriented M2M standardization in ETSI M2M is the definition of a set of common application independent service capabilities.
- These support services shall be geared cater to the typical environment of a stakeholder where IoT applications are to be built, such as an open environment, and shall in particular provide support for a few key service capabilities that are central from an IoT perspective.

**Standards Considerations**

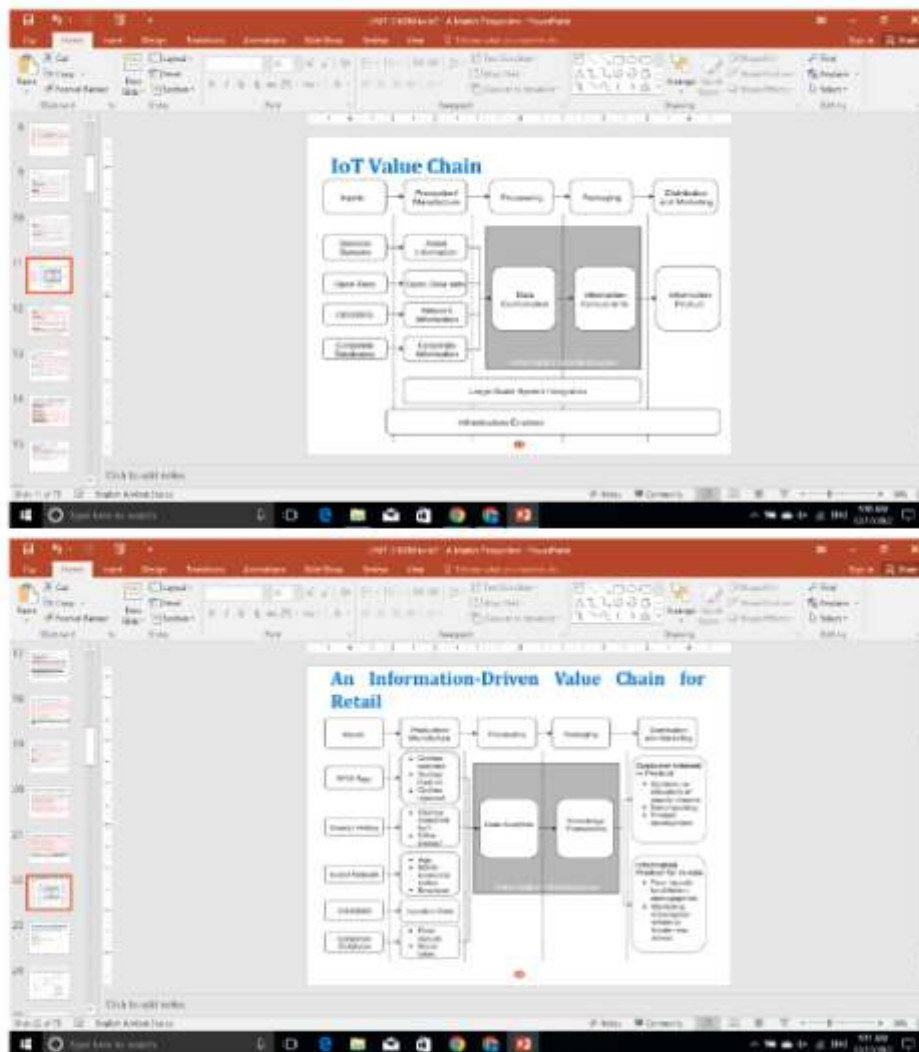

- Standardization around M2M and IoT is rather complex and multidimensional

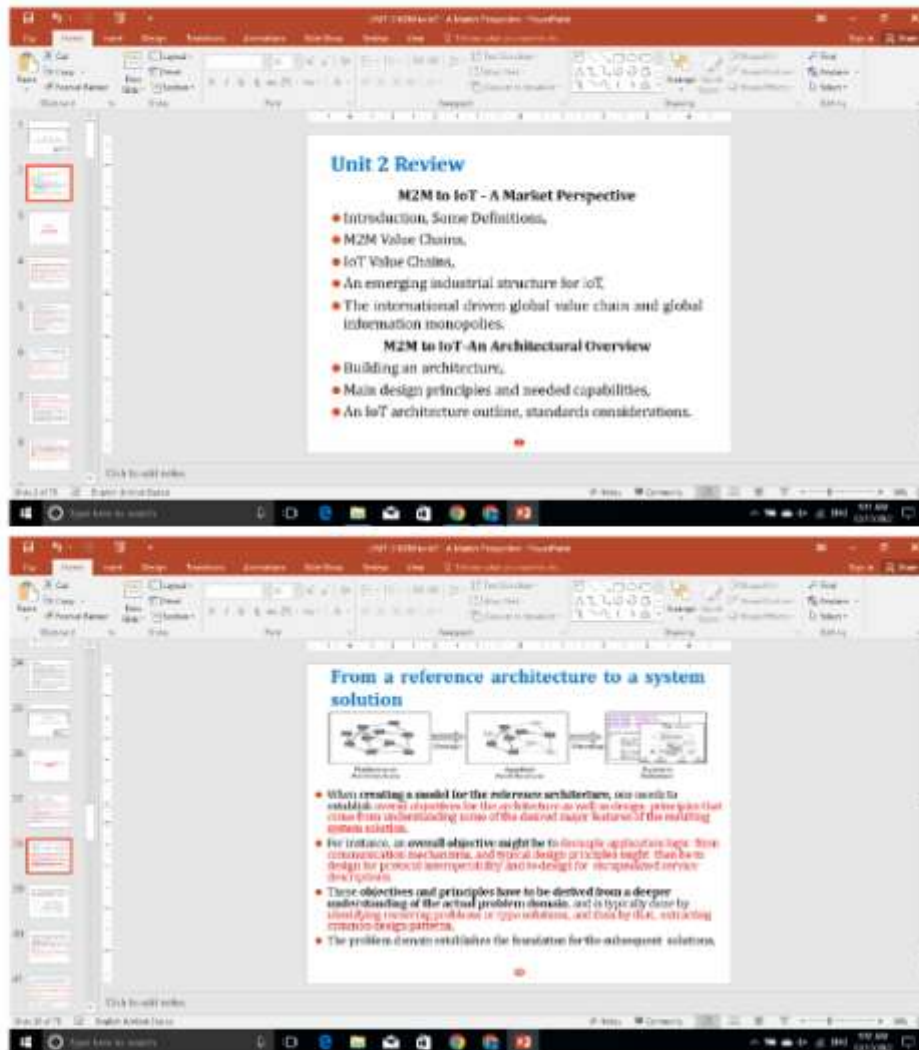

The diagram illustrates the complexity of standardization, showing various standards and protocols such as 3GPP, IEEE, and others, categorized into different layers and domains.

**Service Support Layer**

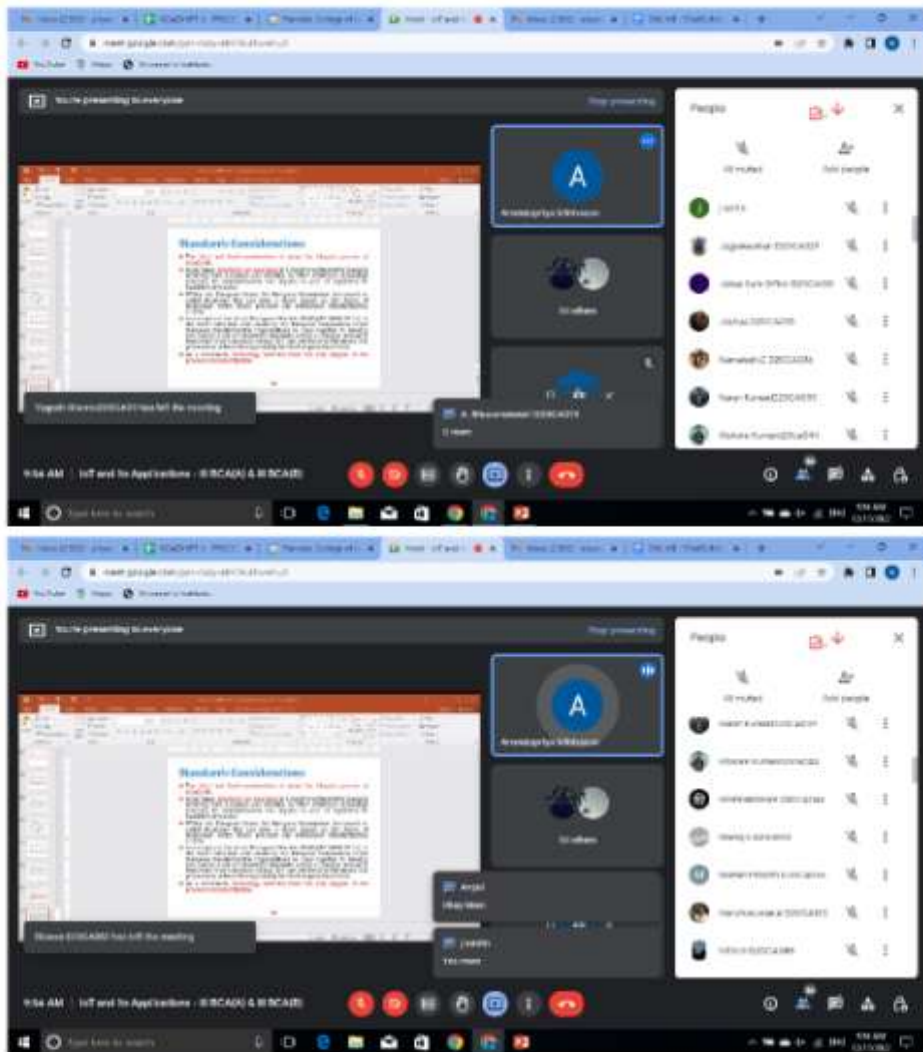

- IoT applications benefit from simplification by relying on support services that perform common and routine tasks.
- These support services are provided by the Service Support Layer and are typically executed in data centers or server farms made up of servers or in a cloud environment.
- These support services can provide uniform handling of the underlying devices and services, thus adding complexity in the intermediate and access layers.
- Examples include remote device management that can do remote software updates, remote diagnostics or recovery.
- Communication-related functions include selection of communication channels if different networks can be used in parallel, for example, for reliability purposes.
- Location based services (LBS) capabilities and services (Geographic Information Systems (GIS) services) are also important for many IoT applications.
- In general, data storage for anything from raw data to knowledge representations, and processing capabilities such as data and event capture, filtering, and stream processing are different core services for many IoT applications.

IoT and Its Applications - III BCA(B)  
Tuesday, December 6 9:00 – 11:00am

[Join with Google Meet](#)  
meet.google.com/dzi-xryo-jsz

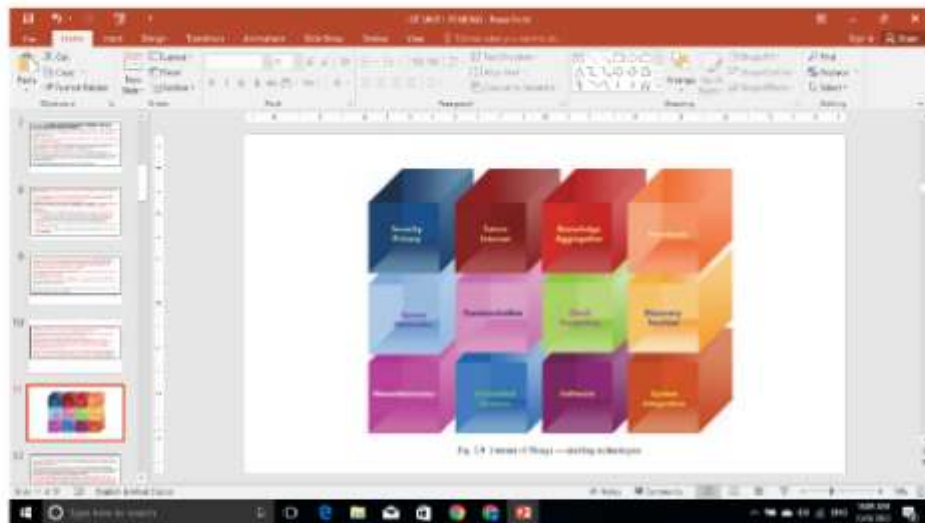

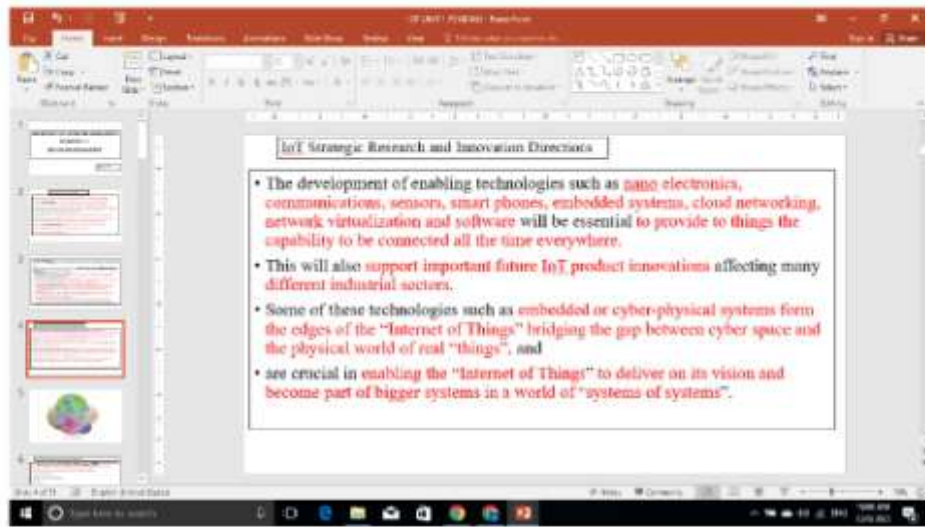

The top screenshot displays a diagram of IoT components arranged in a circular pattern. The components are: Internet of Things (top), Smart Objects (left), Network (right), Cloud Computing (top-right), Computing System (right), Security (bottom-right), and Applications (bottom). The diagram is labeled 'Fig. 1.8 IoT Technology components'.

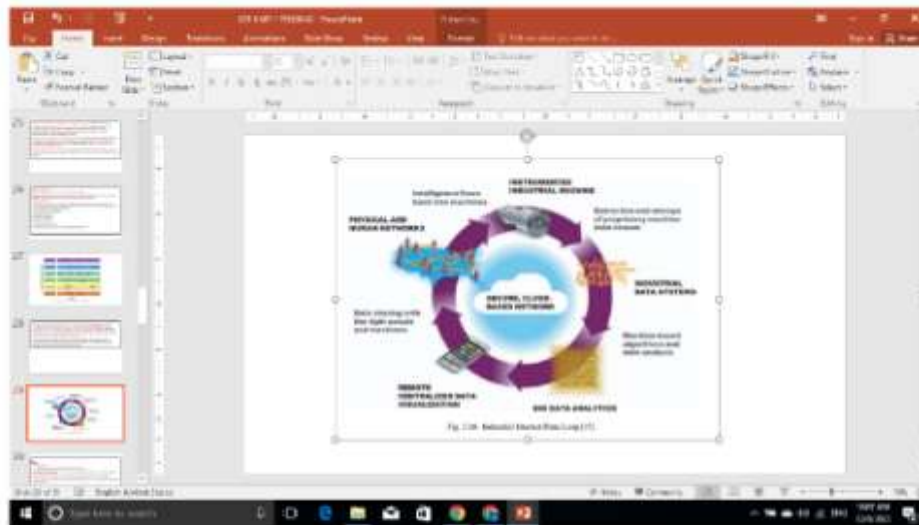

The bottom screenshot shows a slide titled 'Towards the IoT Universe(s)' with the following bullet points:

- an Internet of Things universe might potentially connect everything.
- The overall scope is to create and foster ecosystems of platforms for connected smart objects, integrating the future generation of devices, network technologies, software technologies, interfaces and other evolving ICT innovations, both for the society and
- for people to become pervasive at home, at work and while on the move.
- These environments will embed effective and efficient security and privacy mechanisms into devices, architectures, platforms, and protocols,
- including characteristics such as openness, dynamic expandability, interoperability of objects, distributed intelligence,
- and cost and energy-efficiency

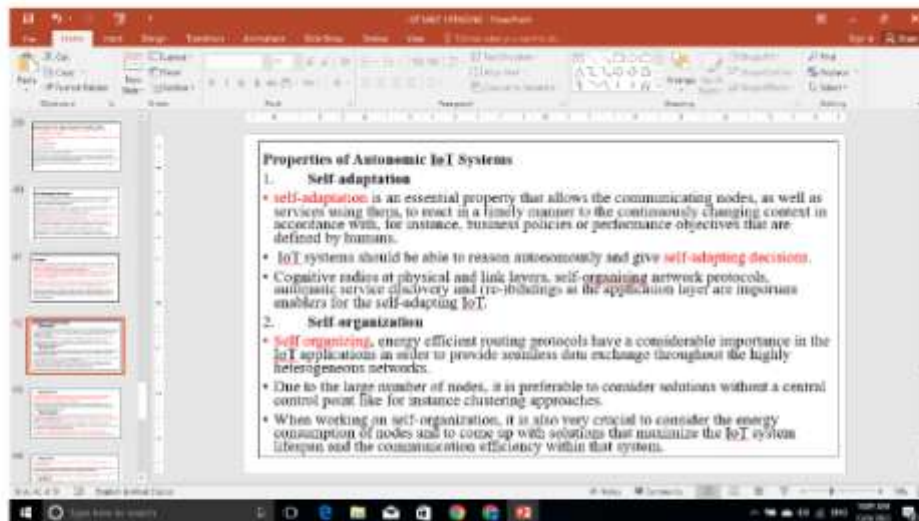

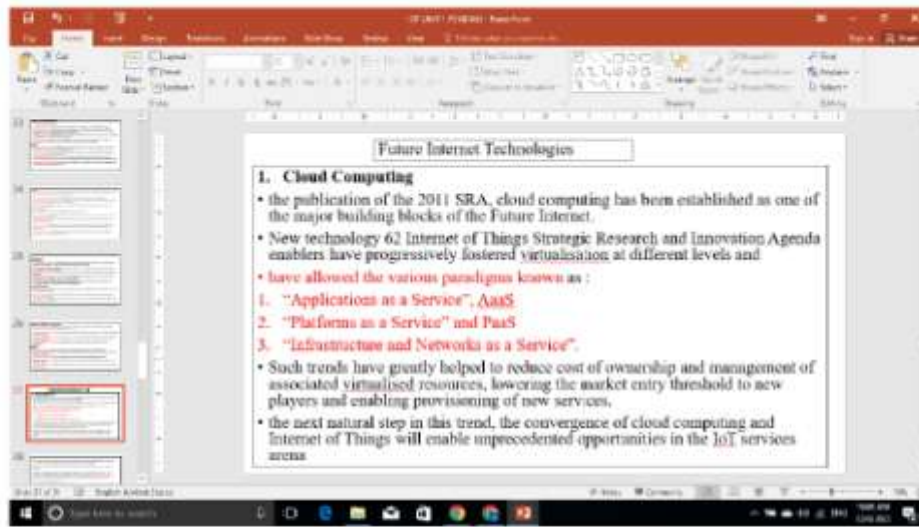

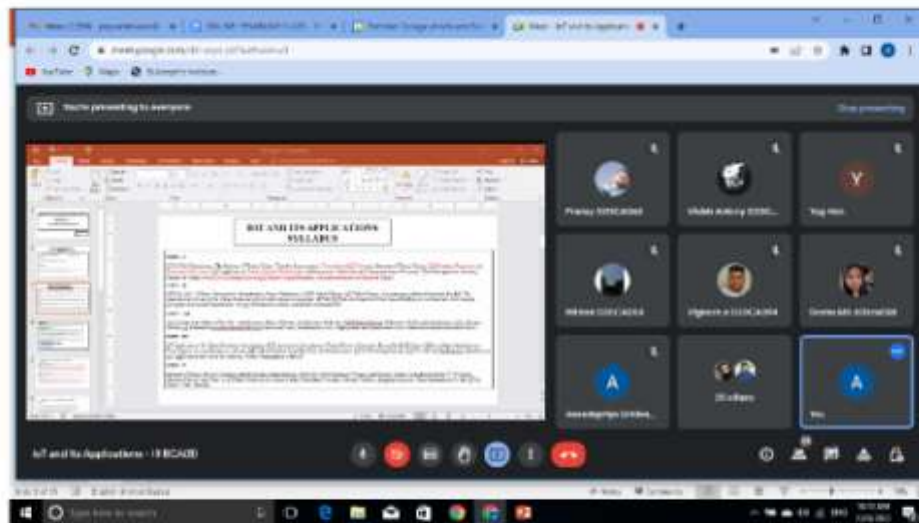

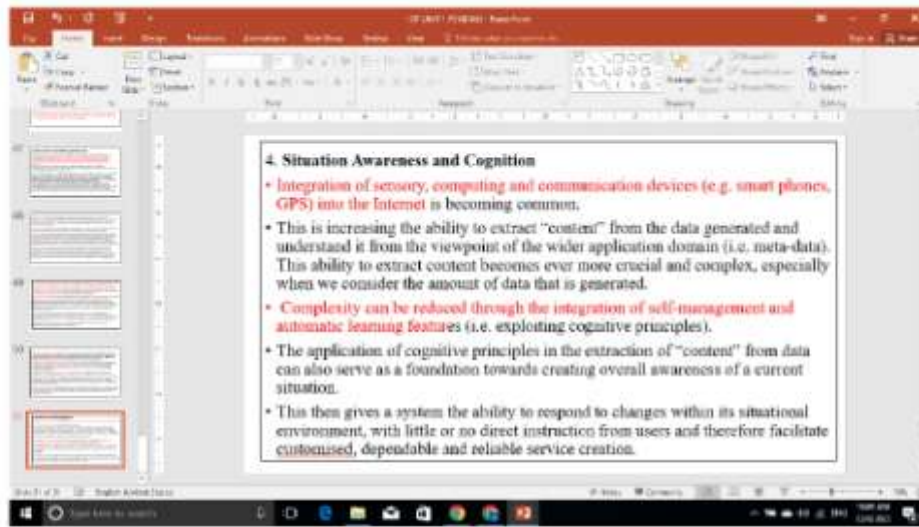

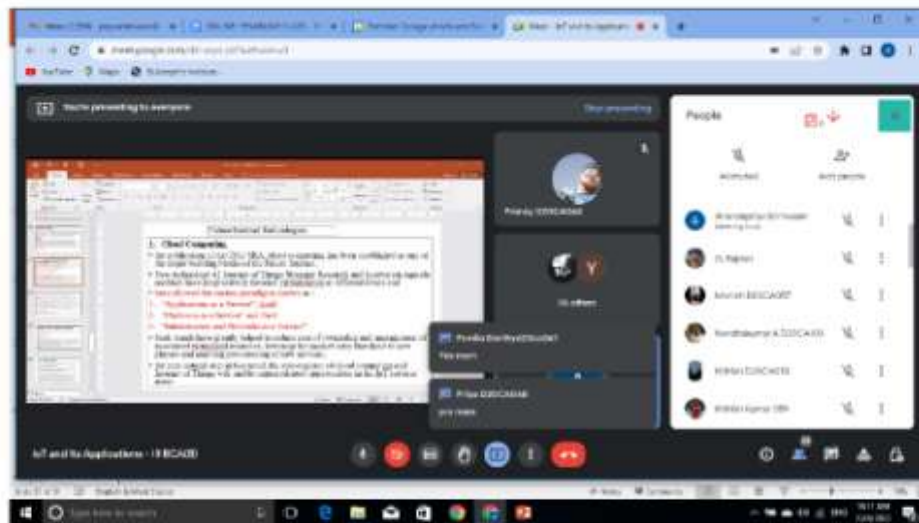

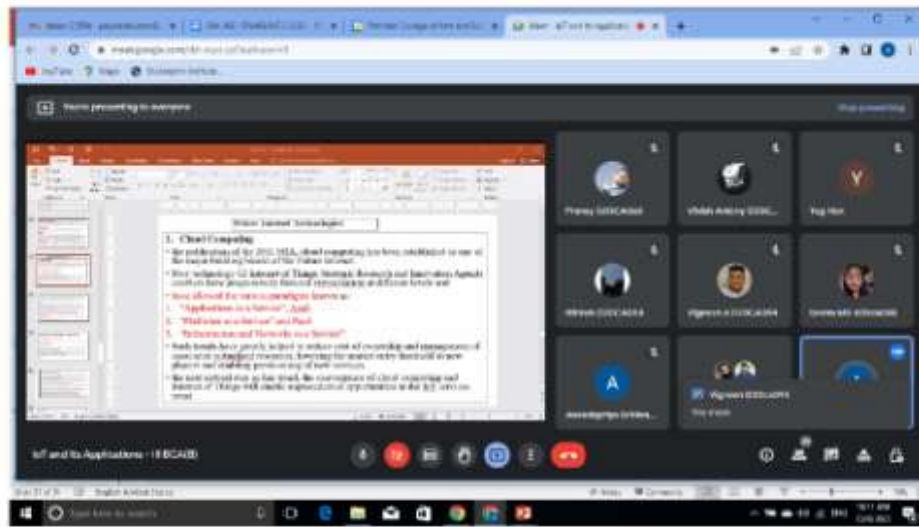

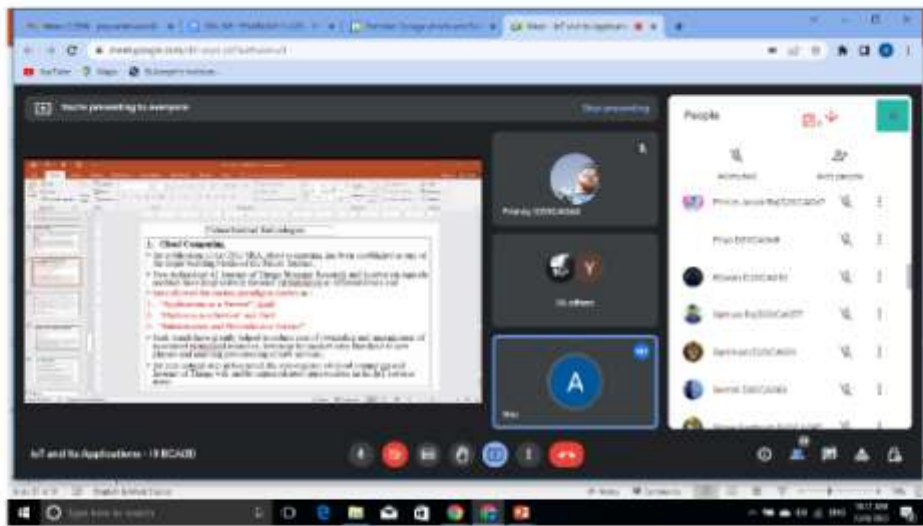

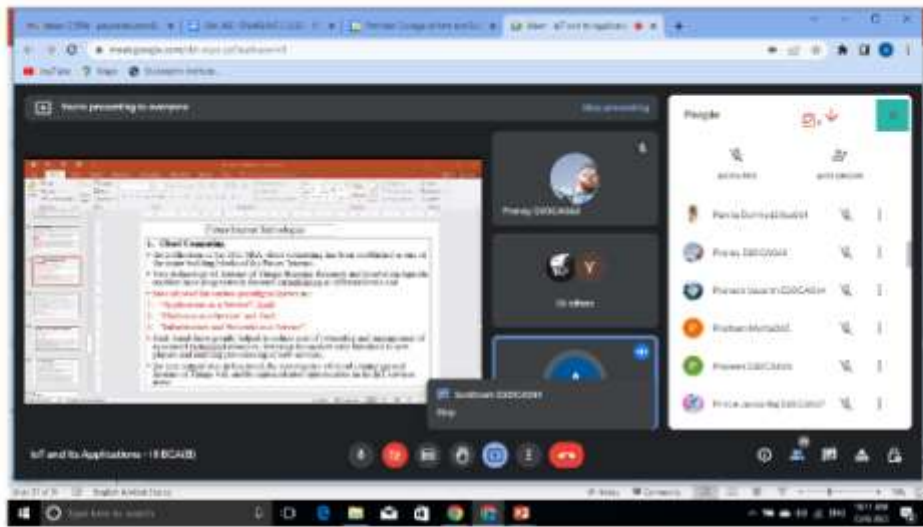

- Cities**
- **Smart Parking:** Monitoring of parking spaces availability in the city.
  - **Structural health:** Monitoring of vibrations and material conditions in buildings, bridges and historical monuments.
  - **Noise Urban Maps:** Sound monitoring in bar areas and hectic zones in real time.
  - **Traffic Congestion:** Monitoring of vehicles and pedestrian levels to optimize driving and walking routes.
  - **Smart Lighting:** Intelligent and weather adaptive lighting in street lights.
  - **Waste Management:** Detection of rubbish levels in containers to optimize the trash collection routes.
  - **Intelligent Transportation Systems:** Smart Roads and Intelligent Highways with warning messages and diversions according to climate conditions and unexpected events like accidents or traffic jams.

IoT and its Applications - III BCA(A)  
03/12/2022  
5th HOUR

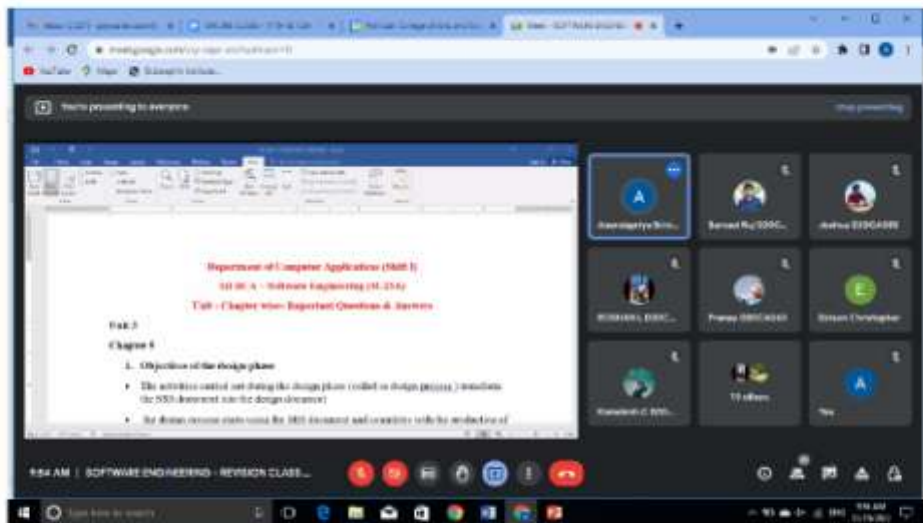

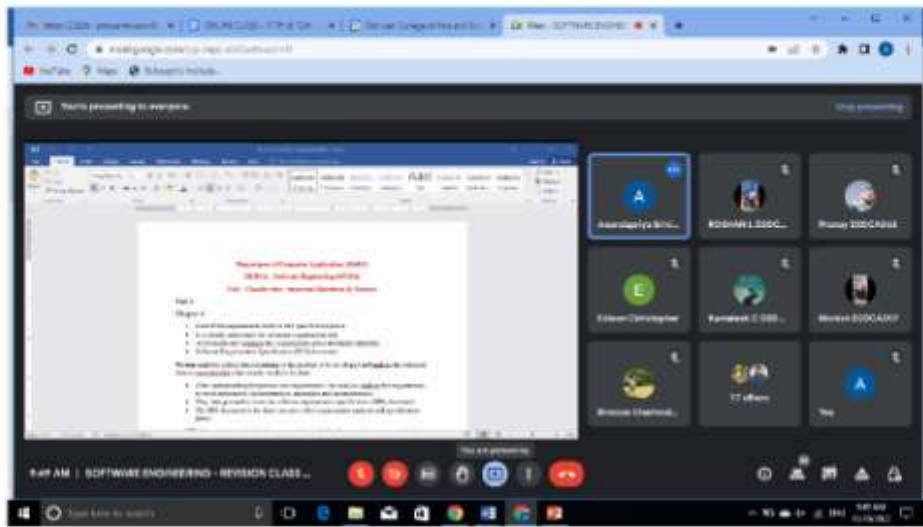

The screenshot shows a Zoom meeting window. The main content is a slide from a presentation. The slide title is "Unit 4 Chapter 7". Below the title, there are two numbered objectives:

1. Define UML: A model used to describe using a modeling language such as UML
2. BASIC OBJECT-ORIENTED CONCEPTS

Below the objectives is a navigation menu with buttons for "Introduction", "Object-oriented", "Classes", "Associations", "Inheritance", "Aggregation", "Generalization", "UML diagrams", "UML classes", "UML objects", and "UML messages".

The Zoom interface shows a grid of participants on the right, including "Anandhya Srin...", "Suresh R J DOD...", "Arjuna EDDAGAGE", "ROSHANI EDD...", "Pravee EDDAGAGE", "Sriyani Chandrap...", "Roshani E D...", "TJ eRena", and "The...". The bottom status bar indicates "10:01 AM | SOFTWARE ENGINEERING - REVISION CLAS..." and "Zoom Meeting | You are in control".

The screenshot shows a Zoom meeting window. The main content is a slide displaying a UML class diagram. The diagram shows a class "Person" with a self-association arrow labeled "self-association". Below "Person" is a class "Student" which inherits from "Person" (indicated by a solid line with an open arrowhead pointing to "Person"). There are also two association lines between "Person" and "Student": one with an open arrowhead pointing to "Student" and another with an open arrowhead pointing to "Person".

The Zoom interface is identical to the first screenshot, showing the same participants and status bar.
